Background JIT compilation events are not being collected. If you are interested in seeing the operation of Background JIT Enabled the 'Background JIT' checkbox in the 'Advanced' section of the collection dialog when collecting the data.See Guide to Background JIT for more.

Below is a table of the time taken to JIT compile the methods used in the program, broken down by module. If this time is significant you can eliminate it by NGening your application. This will improve the startup time for your app.

The list below is also useful for tuning the startup performance of your application in general. In general you want as little to be run during startup as possible. If you have 1000s of methods being compiled on startup you should try to defer some of that computation until absolutely necessary.
